

NBC Casualty Bag(Full)

On injury during the NBC war, the personnel who cannot move is supposed to be kept away from the hazardous environment and to provide medical aid. The individual is encased fully in the casualty bag and is carried for medical aid. It is rectangular in shape. The casualty bag made from Fabric Nylon Repellent Specially treated OG, activated charcoal coated non-woven fabric, LDPE Laminated HDPE Fabric and Fabric cotton OG (Muslin cloth).

Repellent fabric specially treated is used on the outer surface of upper layer and in continuous length and the intermediate layer is of charcoal coated non-woven fabric covered with fabric cotton. The bottom layer of outermost surface is of LDPE Laminated HDPE fabric which acts as ground sheet. The charcoal side of fabric of both the layer shall face the body. The side of the bag to be stitched with spun nylon thread and one side in full length is kept open where fastener hook and loop are provided to open and seal the individual when encased. A window is made on the upper side of the bag where transparent polyester sheet is stitched to facilitate the monitoring & watching the casualty. Tape nylon and buckles are attached to tie the bag at different places at each side.
