Outlook:				(E) Sikkim			
				1.	North Sikkim	1	
				2.	East Sikkim	1	

(Authorised Signatory) For Director

DANGER DEGREE	DANGER LEVEL	INTERPRETATION						
DEGREE		Snow condition	Avalanche likelihood	Preferred action				
1	Green	Snowpack on slopes, if any,	reare available activity is possible with external	 Valley movement is generally safe. Movement on snow-loaded slopes with <i>care</i> only after ascertaining its stability. Explore slope stabilization by Artificial Triggering. Watch/prepare for higher danger level 				
2	Yellow	Partly unsafe condition. Some avalanche paths are loaded with unstable snow.	few avalanche paths.	 Valley movements with <i>care</i>. Avoid movement on snow-loaded slopes. Explore slope stabilization by Artificial Triggering. Watch/prepare for higher danger level 				
3	Orange		most avalanche paths and may reach the valley	Restrict movements to carefully selected safer routes through valley only and with extreme care. No movement on snow-loaded slopes. Evacuate from unprotected settlements on/near the avalanche paths.				
4	Red		avalanche paths and may reach the valley bottom.	 Suspend all movements near the avalanche paths. Evacuate from all settlements on/near the avalanche paths. Watch/prepare for higher danger level. 				
5	Black	All avalanche paths are loaded with deep unstable snow.	Large size avalanches are likely from all possible avalanche paths even from moderately steep terrain. Avalanches may follow unexpected flow paths. Multiple triggering's are likely from same slopes.	Evacuate from avalanche prone areas.				
	 Movement with care: All safety measures to be taken while crossing suspected avalanche path Movement with extreme care: Rescue party shall stand by in addition to above 							

<u>Disclaimer</u> — Above information / warning bulletin is provided after analyzing the current snow and met data from the field stations and projected weather from models. It is our endeavour to analyses the data with utmost care and draw a precise avalanche forecast. However, precautions must be observed during all movements irrespective of the level of danger predicted as snow and weather conditions in mountain may vary rapidly in space and time.
