## 50mm IR Flare

Infrared (IR) guided missiles pose a major threat to military aircraft. For aerial intercept mission, a vast number of IR guided air-to –air missiles have been developed around the world. Military as well as civilian aircraft/ helicopters are prone to attack by ground to air and air to air IR guided missiles. The IR flare is used to seduce an IR seeker away from the target by having a stronger signature than that of the target itself.

ø50mm IR flare is a Dia 50mm size cartridge, which produces an intense IR radiation in the desired waveband for more than 5s duration on initiation. The IR Flares are used to protect the aircraft from heat seeking missiles. The Flare has an electrically operated Impulse cartridge (IC). Once electrical pulse is provided by the aircraft, the IC functions and produces a flash, and gas pressure is generated over the Safety and Functioning Unit (SFU). The SFU has a spring loaded slider. Once the SFU along with the flare pellet is ejected out of the container, the flash is provided to the flare pellet which ignites in the air producing very intense IR radiations.
