

Autoject Injector-Mark II

Threat perception on nerve agents is high as death can happen within short time of exposure if not treated. Autoinjectors were developed for this purpose for the immediate field administration.

Uniqueness of the Autoinjectors developed by DRDE/DRDO is that they are reusable by changing the drug cartridge after the expiry of shelf life. Reusable Autoject Injectors are a device for self administration of these drugs particularly designed for military applications in India. They can deliver the drugs by deep i.m. injection with a spray effect thereby increasing the area of absorption producing the effects close to i.v. injection. Moreover, the needle is not visible in these autoinjectors and the injection is painless. After extensive laboratory and field studies, many modifications in the design have been introduced in this version for improved functioning of the device.
