

DIETHYL PHENYL ACETAMIDE formulation in Isopropanol (DEPA 50%)

Introduction:

Scrub typhus is the potentially fatal rickettsial disease transmitted by bites of infected Trombiculid mite larvae (chigar). India is endemic to scrub typhus. DRDE Gwalior has developed DEPA 50% lotion formulation for repelling trombiculid mites

Salient Features:

- DEPA has been licensed by the Drug Controller General of India as insect repellent.
- DEPA molecule is included in Indian Pharmacopeia.
- Indian Patent granted.
- Formulation has been licensed by state regulatory authorities for production.

How to use: Smear thin layer of DEPA lotion on garments, socks, anklets, etc. on inner side of garments.
