Electro Optical Tracking System (EOTS) for Directed Energy Weapon

Electro Optical Tracking System for Directed Energy Weapons is a high performance electro optical stabilized gimbal system integrated with video tracker which facilitates battlefield surveillance, target acquisition and auto tracking during day as well as night on a static and dynamic platform. It consists of EO sensors viz. Thermal Imager, Day TV and Eye Safe Laser range finder and beam directing optical channels as payloads. Continuous target tracking capability facilitates high precision beam pointing on the target. The system is capable of tracking the targets like UAVs and Drones at a range of 5 Kms. This Electro Optical Tracking Systems has a unique feature of autonomous tracking of the target after receiving a cue command from external source like RADAR.
