

A Brief on X-Band MPM for Brahmos Seeker

X-band MPM based transmitter is one of the critical sub-system of brahmos seeker used in terminal guidance of the missile towards the target. With the recent trends in precision guided weapons, the active RF seekers have become rudimentary part of most of the missile platforms owing to its high hit-to-kill capability in all-weather conditions. Transmitter is one of the critical subsystems of the RF seeker which consumes the maximum power as well as the size, weight and volume. The challenging requirements in size, weight and power with increased functionality and performance makes the transmitter technology very critical for the overall system engineering and performance. An X-band compact transmitter is developed based on microwave power module architecture with solid State Power Amplifier (SSPA) as the driver amplifier followed by a power booster mini Travelling Wave Tube (TWT) for achieving better efficiency and noise performance. Microwave Tube Research & Development Centre (MTRDC) has successfully developed X-band transmitter technology to meet the airborne seeker requirement for defence application.
