

First Aid Kit-CW Type A Mark-I

First Aid Kit CW Type-A Mark-I (FAK-A) is loaded with features that most suite the requirements of the user. A light weight plastic material is used to make the container light. Overall dimensions have been chosen to suite fast movements of the person during emergency. The design is in such a way that contents inside will not rattle and mix-up. The kit is water resistant and will not drown in water. FAK-A is ergonomically designed with shape and contours suitable for soldier proof actions. FAK-A has been developed for emergencies of chemical and biological warfare agents. The kit contain items for detection of chemical agents, reagents for personal decontamination, antidotes for chemical and biological agents, antidote for pain, fever and inflammation and with an user handbook with a simple Standard Operating Procedure.
