

FIRST AID KIT CW TYPE-B MARK II

The First Aid Kit CW Type B Mark-II (FAK-B Mk-II) is designed in light weight material, FRP. The contents are distributed in different levels to minimise the space requirement without compromising on content distribution. Contents are arranged in such a way that all the medicines are available in the first deck upon opening the kit. Additional quantities of the contents have been placed in a lower deck. FAK-B Mk-II is ergonomically designed with shape and contours suitable for soldier proof actions. The kit contains antidotes and supportive medicines suitable for a hospital setup. Some of the medicines have been presented in a specially designed doses and presentations suitable for CBRN emergencies where within minutes treatment can be started at desired doses relevant for CBRN context. In addition, the kit is rugged to withstand normal jerks and vibration, and is water-resistant. The kit weighs less than 20 Kgs and is suitable for single man portability.
