

## **Technology for Fabrication, Installation & Commissioning of the LM2500 Gas Turbine Infrared Suppression System for Naval Vessels**

Infrared suppression is a key component to make a naval platform stealthier. As part of Naval Stealth Technologies, NSTL has designed Gas Turbine Infrared Signature Suppression (GT IRSS) System to reduce the temperature of exhaust gas from LM2500 Gas Turbine Propulsion System.

The Transfer of Technology (ToT) aims to develop industrial capability for the manufacture and installation of the GT IRSS System for the LM2500 gas turbine.

The scope of the present transfer of technology includes following:

- Methodology for fabrication of various components
- Quality Assurance Procedure
- Details of sensors and performance measurement systems
- Procedure for Factory Acceptance Tests (FATs)
- Inspection of critical parameters and installation checks
- Procedure for commissioning of IRSS system
- Requirements of Harbour Acceptance Trials
- Requirements of Sea Acceptance Trials
- Onsite training at IRSS test bed on installation of IRSS, performance measurement system, trials methodology.

It is important to note that design of IRSS system is not part of this ToT. Furthermore, this ToT does not oblige the Indian Navy, shipyards or NSTL to place any order for the GT IRSS System with the ToT recipient.

However, it is mandatory for the firm to approach NSTL exclusively for any design consultancy for design of GT IRSS System for LM2500 gas turbines. The intellectual Property Rights (IPR) of the GT IRSS System for the LM2500 gas turbine on naval platforms will remain solely with NSTL.
