

## **ARMoured CREW CABIN FOR MOUNTED GUN SYSTEM (MGS)**

The strengthened and armoured crew cabin in MGS is designed to withstand muzzle blast pressure during gun firing and is also small arms fire protected (STANAG level 1). The construction includes a metallic framework and armour plates. The side and front sloping wall surfaces will provide a standoff distance that deflect the blast waves impinging onto the wall and also deflect various types of small arms ammunition. Each side wall is provided with 02 doors (front for driver/ co-driver and rear for crew) hence, making it a 04 door cab, enabling quick deployment of crew. The cabin is manufactured from high strength structural steel (internal frame work) and armour plates having requisite strength to withstand severe blast forces and small arms fire. The strengthened cabin is configured to accommodate 06 crew members (02 at front & 04 at rear) with their personal weapons, ammunition and rations. For effective locking of all the doors during firing & transportation, three point locks are used. Standard ergonomic seats along with seat belts for driver, co-driver and rear crew members are provided inside the cabin. HVAC is provided for environmental control inside cabin. Cabin tilting mechanism has been designed to hold armoured cabin during tilting for engine maintenance. The cabin is provided with FRP dashboard to suit MGS requirement and with various lighting arrangements such as beacon lamps, search lights, map reading lamps, head lamps, fog lamps & LED lighting. Temporary metal side cover is to be fixed on side door windows for protection of BP glass against firing at minimum traverse at zero elevation.
