

UPGRADED NATO SUIT

Upgraded NATO suit is a personal protective clothing specially designed for pilots and aircrew operating at high altitudes and its Airworthiness obtained from RCMA (AC).

Salient features

- The Upgraded NATO suit is a cold weather protective clothing intended to provide protection to aircrew positioned at high altitudes.
- The suit is essentially a single piece overall that is ergonomically designed to meet a combination of functional and comfort properties
- The light weight overall offers excellent insulation to weight ratio and has been tested under simulated and practical cold weather conditions (wind velocity).
- The thermal vest and drawers which are used in tandem with NATO clothing is made out of fine denier polyester fibres and has been designed to provide adequate thermal insulation and comfort properties.
- The knitted pile structure has been engineered to trap more air and helps in excellent moisture management to keep the wearer in a physiological comfort state.
