

Wireless Control cum Actuation System (RED)

Remote electronic actuation device, Wireless Control cum Actuation System consists of two electronic hardware systems (user's remote and ground system). Both remote and ground systems communicate to each other over encrypted RF signal in the command and response mode. The design of the remote system is such that it is capable to configure and can engage multiple number of ground systems. Both systems are having compatible transceiver RF modules, which enables system operation up to certain distance in the line of sight (LoS).

Micro-controller based processing electronics in the remote and ground side systems, rechargeable main battery and two dedicated non-chargeable batteries for two independent triggering signals by the ground side system, remote system design having segment LED display interfaced to the I/O of the micro-controller board and ground system which is having two levels of in-built software controlled hardware circuit and its feedback display on the remote etc.
