

DMR-249A Grade Steel Billets for Naval Applications

Billets are rolled product having rectangular cross section manufactured from cast ingots or continuous cast slabs. Billets are used as feedstock to manufacture bulb bars by rolling. The rectangular cross section of billets i.e. (width x thickness) ranges from minimum-(80 x 100) mm to maximum-(250 x 100) mm with requisite saw cut length to suit as feedstock for lowest section (P6) and highest section (P24) of bulb bars respectively. DMRL has optimized steel making parameters and finalized QAP to ensure billets with improved metallurgical quality. The ToT seeking industry has to develop the roll pass design on his own for converting the ingots to the billets of specific cross section by rolling to meet dimensional requirements. Billets have been accepted as feedstock for manufacture of bulb bars by the competent authority of Indian Navy and a Naval Construction Document: NCD 0249 Part-III Issue 1, April 2011 has been issued by Directorate of Naval Architecture (DNA), Integrated Headquarters (IHQ), MOD (Navy). DMR 249A Billets are currently in production at approved manufacturers for use as feedstock to manufacture bulb bars.

Salient feature:

The billets find use as feedstock to manufacture the finished product, namely, Bulb Bars which are used as hull stiffeners in naval construction by Indian navy/ Shipyards.
