

Rotary Electro Mechanical Actuator 40 Nm (REMA40M)

Airworthy actuators have long been a technology critical to Indian Defence programs with indigenous developments limited to ground applications and ones with limited operational life. Aerospace grade actuators are marked by their high-power density and extremely rugged performance capabilities, delivering fault free performance in a wide range of temperatures and severe environmental conditions.

REMA-40 actuator uses all the indigenously design and developed components (excepts potentiometer) hence reduces the dependency over imported components which leads to lesser development time and cost.

Configuration:

REMA40 typically consist of a brushless DC motor as a prime mover, precision-engineered high reduction gear train, and robust corrosion-resistant output shaft. Also it consists of potentiometer for position sensing. These rotary actuators are driven by digital actuator controllers.
