

Infrared Transmissive Sapphire Optical Component with Hard Coating

Deposition of Infrared transmissive coatings on Sapphire panels is a thin coating applied on Sapphire substrate, designed to improve transmission of Infrared radiation used for various aeronautics application. The coating deposition onto Sapphire substrate is a highly challenging task as the coated Sapphire panel has to meet both Infrared transmission and durability requirements. This innovation provides process of deposition of Infrared transmissive coatings on Sapphire panels. The coated Sapphire panels may have applications as protective outer layer lenses for EO-IR cameras, EO-IR transparent dome of EO-IR sensors, EO-IR transparent dome of missile systems, pods of forward looking IR surveillance systems and passive missile approach warning systems of UAVs/Fighter jets.
