Rubber based peelable coating used for temporary protection of structures/spares from corrosion/scratches/seepage of water has been developed.

**SALIENT FEATURES**
- Applicable by brush/roller
- Drying by solvent evaporation
- Dry film thickness: 45 to 50 µm in single coat
- Easily peelable
- Adhesion: 1-2 Mpa
- Provide corrosion protection up to six months

**AREA OF APPLICATION**
- Nuts and bolts of any metallic structures
- Missile joints
- Metallic & non metallic structures requiring frequent dismantling

**STATUS**
- Technology available for transfer
